no. 3, p. 915-920.

DESCRIPTORS: *Herring, Growth, Age, *Food,
Ecology, Japan

The secular variation of the total length of spring
herring in the western coast of Hokkaido was studied
concerning the year classes from 1907 to '47 by using
the moving average by 5 years. In regard to the growth
of the fish, same tendency was seen in each age class
in each year. The growth rate of fish was large before

A NEW PITCH EXTRACTOR. [1962] 6p.
Order from SLA \$1.10

62-18084

Trans. of [Nihon Onkyo Gakkaiishi] (Japan) 1960, v. 16,
no. 4, p. 279-281.

DESCRIPTORS: *Acoustic detectors, *Pitch discrimination,
Noise analyzers, *Auditory signals, Sound,
Frequency shift.

A new principle is described which permits not only
extraction of pitch frequency, but extraction of
formation of new pitch from a set of speech information.
This is achieved by discriminating the zero crossing of
frequency shifted signal. By continuously increasing the
amplitude and then overlapping, it is possible with the
present method to detect pitch stream which begins to
appear in low energy environments and to suppress noise
with the result of better waveform. In the detection of
